Reviewer's report

Title: Measured and modeled personal and environmental NO2 exposure

Version: 2 Date: 2 April 2012

Reviewer: Ed Avol

Reviewer's report:

Re-review of Stroh et al, “Measured and modeled personal and environmental NO2 exposure”

Major Essential Revisions Previously Noted
1) Discussion and clarification of multiple use of same subjects…
2) Additional information about samplers used in study and protocols of use…

Minor Essential Revisions Previously Noted
1) Clarification of subject counting in Table 1
2) Comment on seasonality of sampling
3) Sensitivity analysis of workday assumptions
4) Measurement units

Discretionary Revisions Previously Noted
1) Emissions, not emission…
2) Description of Bland-Altman diagram
3) Comparison of measured NO2 levels to guideline values, other cities, etc
4) Figure 2.6 R2 and p values

Responses have been submitted to all of my previous comments.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
