Reviewer's report

Title: Serum Protein Profiles Reflect Coronary Artery Disease in Symptomatic Patients Referred for Coronary Angiography

Version: 3 Date: 7 July 2012

Reviewer: Thomas Wight

Reviewer's report:

The authors should address the following points:

1. Osteopontin also can have an impact on immune function which is not described in this manuscript. This could be important with regards to the results.

2. Some discussion should be given to "false negatives". For example, the list of proteins to be assessed was chosen based on availability of reagents and historical evidence of involvement and many other proteins that are known to be involved in atherosclerosis were not assessed. While the positives will be useful, further evaluation of the negatives would seem needed. Authors should comment.

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
