Reviewer's report

Title: Plasminogen Activator Inhibitor-1 4G/5G Polymorphism and Retinopathy Risk In Type 2 Diabetes: A Meta-analysis

Version: 2 Date: 10 October 2012

Reviewer: Alisa Manning

Reviewer's report:

The revision addresses the concerns brought up in my previous review. I would suggest a change to the sentence in the Discussion which states "So our results only indicated a "possible" relationship between PAI-1 4G/5G gene polymorphism and DR." You already state that your "results should be interpreted with caution."

It would be sufficient to state that "no correction for multiple testing was performed" in place of "So our results only indicated a "possible" relationship between PAI-1 4G/5G gene polymorphism and DR" which is a very ambiguous statement.

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
