Reviewer’s report

Title: The genomic landscape of chronic lymphocytic leukemia: clinical implications

Version: 1 Date: 18 March 2013

Reviewer: Lynne Abruzzo

Reviewer’s report:

In this nicely written Review Article, the authors, who are leaders in the field, give a concise overview of the current knowledge of the genomic and epigenomic alterations identified by next-generation sequencing technologies applied to chronic lymphocytic leukemia (CLL). They also discuss the knowledge gaps and future research directions. The references are comprehensive.

My only minor comment is that I am not certain that "malignization" is a real word. I would suggest using the term "malignant transformation."

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
