Reviewer's report

Title: New insights into mechanisms behind miscarriage

Version: 1 Date: 9 April 2013

Reviewer: Arri Coomarasamy

Reviewer's report:

This is an exceptionally well-written review of a complex but exciting area where new insights are becoming available at a rapid pace. The article has been written by well recognised experts in the field. My comments are all minor:

1. This is a review of existing literature with opinion added to it. The authors need to be explicit about how they found the evidence, ie, was there a literature search? What search terms? Which articles were included and which were not? Why?

2. Page 5. It should be 0.8 to 1.4%, not 0,8 to 1,4%

4. Page 10. I believe it should be ALIFE 2 study, not A2LIFE study.

I recommend publication of this article.
