Reviewer’s report

Title: What is next after the genes for autoimmunity?

Version: 1 Date: 30 May 2013

Reviewer: Lisa Barcellos

Reviewer’s report:

This review is a nice overview of the problems and promises of the applications of genomics to research on ADs. However, it is more of an introduction rather than a comprehensive assessment of challenges. As a result, the article, while not stating anything that is inaccurate, doesn't bring new ideas to the table regarding limitations or successes of the research, accomplished to date. There is no real synthesis of information presented in Figures 2 and 3.

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
