Reviewer's report

**Title:** Acetylcysteine for prevention of contrast-induced nephropathy after intravascular angiography: A systematic review and meta-analysis.

**Version:** 1  **Date:** 5 June 2004

**Reviewer:** Marc De Kock

**Reviewer's report:**

General

-------------------------------------------------------------------------------------------------------------------------------------

**Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)**

-------------------------------------------------------------------------------------------------------------------------------------

**Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)**

-------------------------------------------------------------------------------------------------------------------------------------

**Discretionary Revisions (which the author can choose to ignore)**

I think the doses and the timing of administration of NAC is of primary interest. Do you think that creatinine is the best way to monitor tubular cells oxydative injury?

**What next?:** Accept after discretionary revisions

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** Yes

**Declaration of competing interests:**

none
