Reviewer's report

Title: Reduced hippocampal activation during episodic encoding in middle-aged individuals at genetic risk for Alzheimer's Disease: a cross-sectional study

Version: 5 Date: 14 October 2005

Reviewer: Lars Nyberg

Reviewer's report:

General

I have examined the response of the authors to my latest set of points, and I find that I have noting further to add. In my opinion, this paper can be accepted and it will make an important contribution to the literature.

-----------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-----------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-----------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

-----------------------------------------------------------------------------------------------------------------------

What next?: Accept without revision

Level of interest: An exceptional article

Quality of written English: Acceptable

Statistical review: No
