Title: Low birthweight and preterm birth in young people with special educational needs: a magnetic resonance imaging analysis

Version: 2 Date: 12 December 2007

Reviewer: david gadian

Reviewer's report:

I think that the revised paper manuscript is acceptable, but there is still one small point that could be addressed. I asked whether the correction for multiple comparisons was a familywise error correction, but the response doesn't say whether it was. My question was intended to distinguish between familywise error and the false discovery rate that was subsequently introduced into the SPM analyses. I believe that the standard SPM99 package only uses the familywise error correction and that presumably this was what the authors used.
