Reviewer's report

Title: Factors associated with Institutional Delivery among Mothers in Bahir Dar City Administration, Amhara Region: A community based cross sectional study

Version: 2 Date: 18 December 2013

Reviewer: Sohail Agha

Reviewer's report:

Major Compulsory Revisions

The report needs to be thoroughly edited. The writing is not up to publication quality. More justification is needed for inclusion of variables related to age at marriage.

It is unclear whether the urban and rural data were combined for the logistic regression. If they were combined, there should be an odds ratio for urban vs. rural. However, none is given.

The difference between urban and rural areas is so substantial that it might make sense to present urban and rural regression results separately.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I have no competing interests.
