Reviewer's report

Title: The Effectiveness of Early Lens Extraction with Intraocular Lens Implantation for the treatment of Primary Angle Closure Glaucoma: A Randomised Controlled Trial.

Version: 4 Date: 14 March 2011

Reviewer: Charlie Goldsmith

Reviewer's report:

For the most part, the comments from the last review have been handled properly. However, there are still two issues that the authors have not been consistent in their handling. These should be corrected before the protocol is accepted for publication.

1. The authors handled Items 2 and 6 correctly; but not Item 13. Also, part of Item 12 was handled correctly, but not the entire set.

2. Page 17, paragraph 4, line 5. To properly use the data from this utility measure replace [have a possible range] by [vary]. The fact that clinicians misuse the term [range] in their writing is NOT a justification for continuation.

3. P 18, p 2, l 1. Replace [Chairman] by [Chair] to be consistent with P 18, p 3, l 1.
