Reviewer's report

Title: A Meta-analysis of the effects of Exercise Training on Left Ventricular Remodeling Following Myocardial Infarction: Start early and go longer for greatest exercise benefits on mortality

Version: 2 Date: 20 March 2011

Reviewer: David Thompson

Reviewer's report:

Minor Essential Revisions
1. In the text the authors make it clear that the quality of the trials reviewed were of low to medium quality and I think this should be emphasised in the conclusions
2. In the References, the journal titles are in an inconsistent format i.e, from 35 onwards they are in full

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
