Reviewer's report

Title: Efficacy of single dose Gentamicin in combination with Metronidazole versus multiple doses for prevention of post caesarean infection

Version: 2 Date: 27 January 2012

Reviewer: Fiona Smaill

Reviewer's report:

The authors have satisfactorily addressed my important points in their revised manuscript.

Discretionary revisions

Even though two clinicians who are not aware of study group allocation will make the assessment of infection, study participants may know which arm of the study they are in if they see how many doses of antibiotics they get. I don't imagine, however, they will tell the assessors.

The abstract needs to be corrected to state that candidates in "B" receive the same drugs prior to the operation and continue with GENTAMICIN and metronidazole for 24 hrs"

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
