Reviewer’s report

Title: SMART MOVE: A randomised controlled trial of a smartphone-based intervention to promote physical activity in primary care (Study Protocol)

Version: 2 Date: 9 May 2013

Reviewer: Tobias Freund

Reviewer’s report:

Glynn et al. report the protocol of a randomized controlled trial of a smartphone-based intervention to promote physical activity in primary care. Increasing physical activity is a demanding task in primary care practice and the use of smartphone apps appears to be a promising approach to support this task. The manuscript is well written overall. Prior to publication of the protocol in Trials I suggest to change tense in table 1 from past tense to future (as done in the rest of the manuscript).

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

No conflict of interest.
