Reviewer’s report

Title: The impact of supported telehealthcare monitoring in people with type 2 diabetes: study protocol for a randomized controlled trial

Version: 2 Date: 1 June 2013

Reviewer: Harald Sourij

Reviewer’s report:

Wild et al. present a study protocol for a randomised controlled trial investigating the impact of telemetric monitoring approach to improve glycaemic control, blood pressure and body weight in patients with T2DM. The manuscript contains all the information required.

Minor Essential Revision: The manuscript would benefit from a short Discussion section, including the potential limitations of the study. One has already been mentioned under Baseline measurements: blinding of the research nurse can not be guaranteed. Another one would be the assumption in the sample size estimation that the outcome measurements in the control group will not change from baseline.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
