Reviewer's report

Title: Mothers After Gestational Diabetes in Australia Diabetes Prevention Program (MAGDA-DPP) post-natal intervention: study protocol for a randomized controlled trial

Version: 2 Date: 24 August 2013

Reviewer: Harald Sourij

Reviewer's report:

This is a well written and clear manuscript on a study design.

Major Compulsory Revisions:
The Primary Outcome is not quite clear to me - the authors talk about change in diabetes risk, as determined by changes in FPG, weight and waist circumference.
The sample size estimate is based on changes in FPG.
The authors should clarify if they aim to use FPG as the primary outcome or FPG, weight and waist circumference as Co-primary outcomes, which will finally have an impact on the study SAP and the way of alpha-spending.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
