Title: The effect of Baduanjin exercise for physical and psychological well-being of college students: study protocol for a randomized controlled trial

Version: 3 Date: 21 November 2013

Reviewer: Wai Tong Chien

Reviewer’s report:

I have reviewed the revised study protocol for reconsideration to be published in Trials. The authors have responded adequately and satisfactorily to most of my comments. Only two minor points needs further revision:

1. specify the 'follow-up' time points through the protocol;

2. for data analysis strategy, needing to consult a statistician how to write it clear and complete, e.g., unclear what is meant by a special statistician and thee is not indication of post-hoc comparison, or planned contrasts test, for comparison of differences on outcomes between at each post-test, if main effects found significant.
