Dear Editor,

On behalf of my co-authors, I would like to submit our protocol paper entitled “The CHOICES/OPCIONES Study: A randomized controlled trial to compare a decision aid plus patient navigation with usual care on colorectal cancer screening completion in vulnerable populations” for consideration to Trials. It is not being considered for publication anywhere else.

The CHOICES/OPCIONES Study is an American Cancer Society funded randomized controlled trial (American Cancer Society, Grant RSG-13-165-01–CPPB, Reuland PI). The trial will compare an intervention combining patient directed decision aid and patient navigation with usual care for colorectal cancer screening in vulnerable populations, with a secondary focus specifically on Latinos. Clinic sites are in Charlotte, North Carolina and Albuquerque, New Mexico, chosen for their diverse patient populations.

As the corresponding author, I take responsibility for this paper. We hope that you find this protocol paper interesting and will consider publication in Implementation Science.

Sincerely,

Alison Brenner, PhD
