Reviewer's report

Title: Left Ventricular Remodeling After Acute Myocardial Infarction. The Influence of Viability and Revascularization. An echocardiographic substudy of the VIAMI-trial.

Version: 2
Date: 15 April 2014

Reviewer: Piotr Lipiec

Reviewer's report:

The subject of viability and revascularization in patients with coronary artery disease remains controversial. Moreover, it is of considerable clinical importance and therefore, the results of study of van Loon et al. are definitely of interest to clinicians.

I have previously reviewed the manuscript of van Loon et al. for Cardiovascular Ultrasound and I have found it to be well-written and to represent well-conducted study. I have raised some issues regarding this manuscript, but they were all addressed by authors in a satisfactory manner. Therefore, I have suggested accepting this manuscript for publication and despite rejection by Cardiovascular Ultrasound I maintain my opinion.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
