Reviewer's report

Title: Effectiveness and cost-effectiveness of a telehealth intervention to support the management of long-term conditions: protocol for two linked pragmatic randomised controlled trials

Version: Date: 9 December 2013

Reviewer: Lawrence Friedman

Reviewer's report:

I have reviewed this protocol manuscript. It is well-written and contains all of the protocol items necessary. I have just a few relatively minor comments.

1) Table 3 is embedded in the text, whereas Tables 1 and 2 are at the rear. It should be consistent.

2) The status of the Quality of Life measure (page 13) should be updated.

3) The Trial Status (page 13) should be updated.
