Reviewer's report

Title: Accounting for center in the Early External Cephalic Version trials: An empirical comparison of statistical methods to adjust for center in a multicenter trial with binary outcomes

Version: 1 Date: 19 January 2014

Reviewer: Rhonda Rosychuk

Reviewer's report:

I think this is a very well written paper that addresses an important topic. While the methodology exists, it is clear from the literature review that most published analyses of multicentre RCTs do not do the proper adjustment for centre. It is hoped that this manuscript helps to further the education of analysts to include these types of analyses.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
