Reviewer's report

**Title:** Study protocol for MODIAB-Web; a randomized controlled trial evaluating a web-based support program for pregnant women and new mothers with type 1 diabetes mellitus in Sweden

**Version:** 2  **Date:** 4 November 2014

**Reviewer:** Harald Sourij

**Reviewer's report:**

This is an interesting study and a well written protocol manuscript.

**Minor essential revisions:**

1.) The authors write that they will include 146 women in the abstract. According to the sample size estimation they would need 136 subjects and will include 160 subjects, accounting for a 10% lost to follow-up rate. The authors should use a consistent number.

2.) HbA1c measurement will be performed during the study. It is not clear to me whether HbA1c measurement will be performed at a study site visit or whether they will use a reported HbA1c.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**

I declare that I have no competing interests.
