Reviewer’s report

Title: Frontalis Suspension Surgery to Treat Patients with Essential Blepharospasm and Apraxia of Eyelid Opening - Technique and Results -

Version: 2 Date: 8 September 2014

Reviewer: Orlando Guntinas-Lichius

Reviewer’s report:

1) Major Compulsory Revisions: none.

2) Minor Essential Revisions: In the Discussion a paragraph listing the limitations of the study is missing. This should be added. Important limitation are: retrospective design, small sample size, no use, of an objective measurement technique to measure the improvement of eye opening, no use of a validated questionnaire for patient's self-assessment of improved eye opening function.

3) Discretionary Revisions: none.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

All: No
