Reviewer's report

Title: Hard palate localization of squamous cell carcinoma in Fanconi anemia patient: Case report.

Version: 1 Date: 12 December 2005

Reviewer: Thomas Fillies

Reviewer's report:

General

The manuscript deals with the relationship between Fanconi anemia and the early manifesting of oral squamous cell carcinoma. It is an interesting case in this field.

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------

The description of the syndrome has to change in Fanconi anemia.

- It would be desirable to insert an immunohistochemical illustration of the tumour.
- Furthermore, a description of the drug anamnesis would be interesting in this case.
- In the description of the case - the parameter 3,4x10^9/l is unclear.
- The written English needs some correction.

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Unable to decide on acceptance or rejection until the authors have responded to the major compulsory revisions

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published
