Reviewer's report

Title: Liposarcoma of the tongue: case report and review of the literature

Version: 1 Date: 7 April 2006

Reviewer: Henryk Adam Domanski

Reviewer's report:

General
This is a generally well written and interesting case report discussing the diagnosis, clinical aspects and treatment of tongue liposarcoma.  

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)
In the discussion of the differential diagnosis the author includes benign lipoma. One entity that the authors have not included but might want to add is spindle cell lipoma. Spindle cell lipoma is located most frequently in the upper back and neck. On occasion, spindle cell lipoma presents in the orofacial region including tongue and can be confused with well differentiated liposarcoma.

What next?: Accept after discretionary revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable
