Reviewer's report

Title: Endoscopic Sinus Surgery For Maxillary Sinus Mucoceles

Version: 2 Date: 18 May 2006

Reviewer: Wolfgang Bergler

Reviewer's report:

General

-----------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

The article shows a very good overview about the possibilities of endoscopic sinus surgery. 14 patients are a small group, but they seem to be clinically significant, as maxillary sinus mucoceles are rare. The results should be added by topics like allergies and chronic infection in the patients group. In the discussion preoperative and postoperative treatments should be discussed.

-----------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

none

-----------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

none

What next?: Accept after discretionary revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
