Title: Endoscopically assisted procedure for removal of a foreign body from the maxillary sinus and contemporary endodontic surgical treatment of the tooth.

Version: 1 Date: 20 June 2006

Reviewer: enzo E emanuelli

Reviewer’s report:

This article is a well written case report. The approach suggested is a good technique to remove a foreign body without compromising the functional aspect of the maxillary sinus. The only observation I make is that with a simultaneous antero-lateral opening of the maxillary sinus to perform a contemporary endodontic treatment of the tooth, only an endoscopic partial uncinctomy may be useful instead of medial antrostomy.
