Reviewer's report

Title: Early postoperative bone scintigraphy in the evaluation of microvascular bone grafts in head and neck reconstruction

Version: 1 Date: 5 March 2007

Reviewer: Serdar Uysal

Reviewer's report:

General

-------------------------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

-------------------------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

I advise the sensitivity, the specificity, the positive and negative predictive value obtained with the use of the combined technique will show its importance more. Also, the advantage of the use of combined monitoring technique can be emphasized. Some spelling errors have to be corrected and 18. reference has to be corrected.

-------------------------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
