Reviewer's report

Title: Perioperative complications in infant cleft repair

Version: 1 Date: 8 November 2006

Reviewer: Robert Fuhrmann

Reviewer's report:

General
It's a large number of patients, so that the statistical outcome is representative for the whole type of cleft patients.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

I miss the percental statistical analysis.

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
I miss the percental statistical analysis.

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after discretionary revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
