Reviewer’s report

Title: Ectopic internal carotid artery presenting as an oropharyngeal mass

Version: 2 Date: 3 December 2007

Reviewer: Edoardo Vicenzini

Reviewer’s report:

The paper is improved.

Nonetheless, in my opinion, the discussion should still be shortened, considering that the concept of the paper is discussing a case report.

Otherwise I am satisfied with the corrections.

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published
