Reviewer’s report

Title: Team approach concept in Management of Oro-facial Clefts: a survey of Nigerian practitioners.

Version: 2 Date: 25 September 2008

Reviewer: Peter Damiano

Reviewer's report:

The authors have responded adequately in their letter to the major compulsory questions concerning:

1) How were the subjects identified?
2) How many were attempted and refused?
3) How long was the survey?
4) Where did the questions come from?

They did not include nearly as much information in the methods section of the paper however about the above issues. Since this is such a unique attempt at gathering information in a developing country concerning team care and cleft, there will be obvious research limitations that cannot be overcome. In this case, with the clarifications added to the paper, readers should be able to understand the context. I would suggest publishing given these clarifications.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
