Reviewer's report

Title: 3-D reconstruction of a human fetus with combined holoprosencephaly and cyclopia

Version: 2 Date: 10 June 2009

Reviewer: Inger Kjaer

Reviewer's report:

There are still too many figures. As I mentioned in my first review, figure 1b is redundant as it is similar to 1a. The authors have not chosen to reduce the number of figures as I suggested. Only the figures demonstrating new findings ought to be shown. I have indicated in my previous review which ones these are.

Otherwise, many of my previous comments have been included. Now it is up to the editor to decide whether the manuscript should be accepted for publication.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
