Reviewer's report

Title: Bilateral ossification of the auricles: an unusual entity and review of the literature

Version: 1 Date: 27 August 2009

Reviewer: Jörg Günter Kurt Handschel

Reviewer's report:

In the manuscript “Bilateral ossification of the auricles: an unusual entity and review of the literature“ the authors describe a very rare case of an ossification of the auricle with cartilage replacement by bone. Moreover, a review of the literature is presented. The manuscript is well written and all relevant details of the case are shown. In addition, the authors give an extensive review of the international literature including an elaborate and comprehensible discussion.

Taken together, I recommend the manuscript for publication in its current version.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
