Reviewer’s report

Title: Photographic Protocol for Image Acquisition in Craniofacial Microsomia

Version: 2 Date: 25 November 2011

Reviewer: Ahmet Misir

Reviewer’s report:

Thanks for authors for this well-defined methodologic study. the question posed by the authors well-defined, however not new. the methods of this study are appropriate and well described and sufficient details by both tables and figures. the data are sound and well controlled. the manuscript adhere to the relevant standarts for reporting and data deposition.

the conclusions are well-balanced and adequately supported by the data, however a short discussion may be added to this manuscript according to other photographic protocols used by different methodologies.

the title and the abstract accurately convey what has been found.

finally the writing is acceptable.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
