Reviewer's report

Title: Current state of orthodontic patients under Bisphoshonate therapy

Version: 1 Date: 18 March 2013

Reviewer: Thomas Stamm

Reviewer's report:

The present manuscript deals with the effect of bisphosphonates on orthodontic treatment. The authors conducted a literature search concerning guiding principles, clinical studies, and case reports. They summarized the gained experience of orthodontic therapy under bisphosphonate substitution. The paper is accompanied by one table of adequate quality.

The question posed by the authors is new and well defined, the manuscript is well written, concise and complete. Abstract and title are adequate. Material and methods are appropriate, the results accurate and the discussion thorough.

Two minor points remain to be clarified.
- Abstract and Material and Methods section:
  1) "a systematic research .. " search?
  2) Medline is a subset of Pubmed. Do you made a search in Medline (abstract) or in Pubmed (material and methods)? Please clarify.
- Table:
  "Anamnesis" .. I am not sure whether "indication" or "history" fits better. Please reconsider.
- Article type
  On resubmission please change article type to "Review"

I recommend publication of the article.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
