Reviewer's report

Title: Esthesioneuroblastoma: One of the rare causes of proptosis

Version: 1 Date: 30 March 2013

Reviewer: dupuy martin

Reviewer's report:

Major Compulsory Revisions: none

Minor Essential Revisions:
1- Proptosis is an unusual presentation sign for esthesioneuroblastoma. This case of proptosis led to write this manuscript. But neither in discussion nor in conclusion, the authors mention it.

Discretionary Revisions:
1- CT scan is essential, but slice thickness is crucial. Dulguerov et al, in a meta-analysis, have recommended fine-cut CT scan (3 mm slice thickness) as initial radiological study of choice. (Lancet 2001).

Level of interest: An article of limited interest

Quality of written English: Acceptable
