Reviewer's report

**Title:** Barriers and Facilitators to Evidence Based Care of Type 2 Diabetes Patients: experiences of General Practitioners Participating to a Quality Improvement Program.

**Version:** 4 **Date:** 22 May 2009

**Reviewer:** Trisha Greenhalgh

**Reviewer's report:**

I think the paper is now greatly improved. I still have problems with the overall framing of the study (because I think the era of studies to encourage GPs follow evidenc-based guidelines is drawing to a close - we already know a LOT about why and why not) but within that paradigm it's a robust piece of work.

There's still scope to improve the style and presentation - your technical editors will no doubt pick off phrases like "To round off...".

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Needs some language corrections before being published

**Statistical review:** No, the manuscript does not need to be seen by a statistician.

**Declaration of competing interests:**
