Reviewer's report

Title: Net benefits: assessing the effectiveness of clinical networks in Australia through qualitative methods

Version: 3 Date: 18 August 2012

Reviewer: Jeffrey Fuller

Reviewer's report:

In the revised manuscript the authors have satisfactorily addressed the points that I raised in my critique.

DISCRETIONARY REVISION

The explanation of the results in table 2 does address my point about the commonalities across the two sites about what was deemed important. The text is a little clunky, however, and given the clarity of the rest of the text, this section on pp15-16 could do with a little more work to make this a finer read.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
