Reviewer's report

**Title:** Developing theory-informed behaviour change interventions to implement evidence into practice: a systematic approach using the Theoretical Domains Framework

**Version:** 1  **Date:** 31 August 2011

**Reviewer:** Jan Clarkson

**Reviewer's report:**

I congratulate the authors on producing a well written and clear report of operationalising a comprehensive theoretical approach to implementation design. This is an important paper demonstrating the process of using the Theoretical Domains Framework. Since the paper is to be one in a series I would expect more detail of the practical issues of applying this technique to be reported elsewhere. If not further comment on the resource intensity and issue of subjectivity would help readers who are considering using the process. Within the text and reference list there needs to be corrections and additions as indicated by the authors.

**Level of interest:** An article of importance in its field

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
