Reviewer’s report

Title: Measuring factors affecting implementation of health innovations: A systematic review of structural, organizational, provider, patient, and innovation level measures

Version: 5 Date: 31 October 2012

Reviewer: Heather Colquhoun

Reviewer’s report:

The author’s response and revisions to this manuscript are well thought through and articulate. I appreciate the time taken to address each of the points raised by all reviewers.

The terminology issues that were present throughout many aspects of the paper have been resolved and are consistent. There is now clarity in terms of the objectives of the paper, required detail regarding the search strategy, the coding process, coding reliability, and the inclusion of education-based measures. Your response to my issues regarding placement of methods versus results content is well taken. I am keen to be consistent with the Implementation Science guidelines and am happy to defer to the journal editor for this particular issue. Many improvements to the conclusion are noted as is the addition of a limitations section. The scope of what was achieved is now consistent with the paper. Well done. I am pleased to accept this paper for publication and look forward to reading it online.
