Reviewer's report

Title: Using concept mapping in the knowledge-to-action process to compare stakeholder opinions on barriers to use of cancer screening among South Asians

Version: 2 Date: 30 November 2012

Reviewer: Frances Stillman

Reviewer's report:

The authors' answered all of my comments to my satisfaction. I found the paper easier to read with the proper description of the concept mapping process. They included the map.

Major Compulsory revision

The map graphic could be better- seems very crude. The cost cluster is not defined and this may be due to only a few points but it seems strange. I think this is a necessary revision.

Minor Essential---Paper could still use some editing- found some minor things heading at top of Page 10 needs to be above the text
2 periods at the end of the 3rd sentence, 2nd paragraph on page 10.

The reference list needs to be reviewed since I found ref 4 and 5 to be the same paper.

Discretionary Revisions

They may want to add a sentence in the discussion about the overlap between ethno-cultural and health education cluster.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
