Reviewer's report

Title: Study of trunk asymmetry in normal children and adolescent

Version: 5 Date: 18 November 2006

Reviewer: Martha Hawes

Reviewer's report:

General
This is much better. The data are straightforward and interpretable, and will be of use to others in the field. Conclusions are appropriate and interpretations thought provoking.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

The article needs one more going-over for minor formatting errors (e.g. format for ‘figure’ citations). I assume this will be part of the final editing process.

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
