Reviewer's report

Title: Somatosensory Evoked Potentials suppression due to remifentanil during spinal operations; a prospective clinical study

Version: 3 Date: 13 April 2010

Reviewer: Michael G Irwin

Reviewer's report:

Thank you for addressing the concerns in my original review. I am not in favour of using large doses of remifentanil (or any anaesthetic/analgesic for that matter) to specifically reduce blood pressure as it is essentially giving an overdose to produce a "side effect". My own practice would be to use a vasodilator.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
