Reviewer's report

Title: A new brace treatment similar for adolescent scoliosis and kyphosis based on restoration of thoracolumbar lordosis. Radiological and subjective clinical results after at least one year of treatment.

Version: 4 Date: 16 September 2012

Reviewer: Hans-Rudolf Weiss

Reviewer's report:

No point to point discussion and still not in journal style, so I guess the authors do not want their paper published.

No answer to the major important queries I have risen, so there is no other way than eject....Without the important discussions it is of no interest, just proposing an old brace newly and not see it in the environment of what can be done for scoliosis patients today.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
