Reviewer's report:

General

----------------------------------------------------------------------------------

Major Compulsory Revisions None

----------------------------------------------------------------------------------

Minor Essential Revisions

This is generally a good paper, and describes a rare condition, so should be published in JCTS. The use of grammar in the early section of the paper needs to be greatly improved in order to make the article more readable and suitable for the readership. I would recommend the authors get the paper proof read before re-submitting it.

In addition, the histology figures need to be made clearer, and there need to be better descriptions of what these show, together with arrows on the figures.

----------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published
