Reviewer’s report

Title: Coronary Artery Aneurysm: Case Report

Version: 1 Date: 12 November 2007

Reviewer: Christopher Mascio

Reviewer’s report:

General

Well-written, focused case-report

-------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

None

-------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

The word in line 2 of the "Case Presentation" section should be "from" not "form".

-------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

Would include presence or absence of murmurs in PE as some of these can be associated with fistulas. Would also comment on other non-surgical treatment options (probably not the best in this case b/c of MI) - ie custom made bifurcated stents and/or medical management.

What next?: Accept after discretionary revisions

Level of interest: An article of importance in its field

Quality of written English: Acceptable
