Reviewer's report

Title: Papillary fibroelastoma of the left atrial wall: A case report

Version: 1 Date: 12 March 2009

Reviewer: Johannes Bonatti

Reviewer's report:

In this case report Bicer and coworkers describe a rare clinical situation, a papillary fibroelastoma of the left atrial wall.

The report including a review of the literature is clearly written, and interesting to read. The case report may increase the awareness of surgeons that this type of tumors is not only found on heart valves but also inside the heart chambers.

It would be interesting what conclusions the authors draw from this specific case.

For some English spelling errors I suggest review of the paper by a native speaker.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published
