Reviewer's report

Title: Strategies to prevent postoperative lung dysfunction after open heart operations

Version: 1 Date: 7 November 2009

Reviewer: FANY CHRONIDOU

Reviewer's report:

A well documented review article with a lot of interesting parts for the specialties involved in an open heart surgery. The whole concept referred to the major questions for all surgeons, anaesthetists and perfusionists throughout the history of cardiac surgery. It is quite extended and probably a minor reduction would be desirable.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
