Reviewer's report

Title: Intrathoracic Fire During Preparation of the Left Internal Thoracic Artery for Coronary Artery Bypass Grafting

Version: 1 Date: 29 January 2010

Reviewer: Horia HS Sirbu

Reviewer's report:

Minor Revisions:
There are too many figures for a case report. Fig.1, Fig.3, Fig.4 are quite similar in the informations about the extensive emphysema of the operated patient. Only one figure is in my opinion sufficient.

Discretionary revisions:
For a case report there are too many authors.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Declaration of competing interests:
I declare that I have no competing interests
