Version: 1 Date: 18 November 2010

Reviewer: Tevfik Prof Tezcaner

Reviewer's report:

The article that is about the operative and early results of CABG operation in female patients with different body mass indexes is a well detailed and discussed study. Female gender has been occasionally accepted as a risk factor in CABG operations and severe obesity potantiates that issue. In this article successful results have been obtained even in severe obese female patients.

The paper seems to be revised for quality of laguage, spelling and grammer mistakes.

Level of interest: An article of limited interest

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
